

# PROPINK® COMPLETE™ WALL SYSTEM

## NO-COMPROMISE SOLUTION FOR HIGH-PERFORMANCE WALLS.

When it comes to insulating the walls of a home, no single product provides the perfect solution. That's why the building science experts at Owens Corning™ Insulating Systems developed the PROPIK Complete™ Wall System. This system utilizes the right products in the right places to allow builders like you to deliver customized performance based on your specifications. So the homes you build will not only provide greater comfort, value and durability, but they'll also be more appealing to home buyers with a lower operating cost.

### A better system for builders.

Unlike other insulation solutions, the PROPIK Complete™ Wall System installs quickly and cleanly. It also allows you to dial in exact R-values to meet or exceed your individual performance targets, energy building codes, and the requirements for high-performance home programs such as EPA ENERGY STAR Home and DOE Zero Energy Ready Home.

### Doesn't slow down the build cycle.

The PROPIK Complete™ Wall System provides exceptional value by:

- Reducing build-cycle times and allowing you to work more efficiently.
- It can be installed while other trades are on-site.
- And, since there's no drying time, drywall can be installed immediately afterward.
- Plus, the PROPIK Complete™ Wall System utilizes High Performance Fiberizing Technology to deliver the highest yield of any fiberglass loosefill insulation available.

### Excellent insulation performance.

The PROPIK Complete™ Wall System fills the entire wall cavity and fits around wires, pipes and electrical boxes. You'll always achieve a Grade 1 install or California QII (Quality Insulation Installation) that will pass inspection the first time, every time. It also provides a higher R-value through dense packing and reduces noise penetration and energy consumption. And since it won't settle or deteriorate over time, its performance is guaranteed for the life of the home.<sup>1</sup>

Fills Entire Wall Cavities

### Verified performance.

The PROPIK Complete™ Wall System, when used with the Inspect-R Density Gauge, gives you the ability to dial in and field-verify exact R-values at installation to be sure you've met or exceeded any codes or requirements prior to inspection.

Inspect-R Density Gauge

## An attractive value for homebuyers.

For potential homebuyers, the PROPINK Complete™ Wall System adds value to their purchase decision. That's because it helps them save money that they can spend on other home amenities. Plus, with the money you save meeting your energy-efficiency targets, you can afford to build in more premium features to attract potential buyers. Here are a few more ways that the PROPINK Complete™ Wall System can help give your homes a competitive edge:

### A promise of comfort that is uniquely yours.

The PROPINK Complete™ Wall System will never settle or deteriorate with age, which means that once you dial in the R-values, you can guarantee that same level of comfort and performance for the life of the home.<sup>1</sup>

### High efficiency at low cost.

When used with Owens Corning™ ComfortSeal Framing Gasket, – the PROPINK Complete™ Wall System provides homeowners with a more energy-efficient home at a lower cost than other insulation solutions. It helps deliver lower HERS scores, which are becoming more important to new homebuyers, and can help save homeowners an average of 15% on heating and cooling costs.<sup>4</sup>

### Safety and peace of mind for crews and homeowners.

The ProPink Complete Wall System is non-combustible, non-corrosive, moisture-resistant and made from at least 55% recycled content. Plus, the components of the system are manufactured by Owens Corning in a quality controlled environment – never on your jobsite. Your potential buyers will rest easy knowing that you put their family's safety first.
